# XAVIER ROSSET

At the age of 19, snowboarding and living in Verbier, I used to watch the X-trem thinking... **I wanna do it.**

A few years later, I finished 2nd in the legendary competition and was among the top 5 world snowboarders.

**A dream was coming true**, a realization that changed my perception of life.

After having battled the cold and being surrounded by many people, I've decided to try the opposite.

I therefore left **300 days alone on a Pacific Island** with nothing but a Swiss knife and a machete. This adventure was very challenging and if I had to do it again, I think I wouldn't. But I went to the end of my dream.

I came back with an extraordinary life experience, a better knowledge of myself and hundreds of hours of footage. A 52-minute film was edited by the talented director,

# OLIVIER VITTEL

My first collaboration with Xavier Rosset started over 15 years ago. My activity of audio-visual productions and unshakable friendship led to the making of the film recounting this adventure, **«300 days alone on an island»**.

We now want to make you discover, through Xavier, a beautiful and different world, populated by friendly, welcoming and engaging people.

From this common desire, begins a new original adventure ...

Olivier Vittel

Xavier Rosset

## A POSITIVE VIEW OF OUR WORLD AND OUR TIME

While the media overwhelm us with negative and distressing news, we want to show our planet and its inhabitants in a different light through our own eyes: Positive

### MEET PEOPLE (EXTRA)ORDINARY

This adventure will be **an opportunity to meet (extra) ordinary people**, to tell the story of a shared moment of life, their traditions, their culture and lifestyle.

This adventure will allow us to learn their perception of their existence and their conception of the future.

To reach the chosen places, the motorized hang-glider is the ideal means of transport. It allows to reach inaccessible places and to arouse the interest and curiosity of people.

### A RECORD NEVER ATTEMPTED

**A world tour with such a device has never been undertaken.**

2300 km autonomously over the Atlantic, the crossing of Greenland and Flying over the Himalayas, **«Fly the World» is a pioneer's challenge that we want to achieve.**

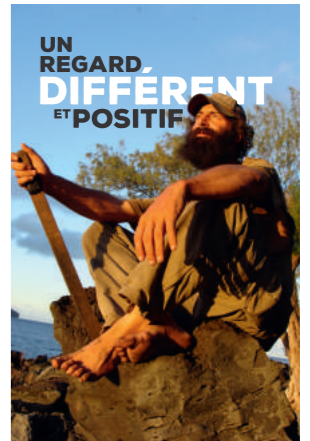

### AN ADVENTURE TO FOLLOW LIVE

We want to share our adventure with the whole world. Whether in the air, under water or on land, this adventure will be followed live by the internet users from around the globe. Interactive, this adventure will be experienced in real time. People will know our position and will communicate with us, offering activities or special meetings.

### UNIQUE DOCUMENTARIES

On our return, we will produce a series of documentaries. The image quality being our top priority, specific HD equipment will be mounted on our devices. A set of technical devices including a drone, will be at the centre of our equipment.

**80'000 KM  
400 DAYS  
50 COUNTRIES  
5 CONTINENTS**

on a motorised hang-glider to tell the tale of our planet and its inhabitants through our positive outlook
